OF ZINC METALS AND ALLOYS

WORKS: COCKLE CREEK, BOOLAROO, NSW, TEL. NEWCASTLE 581241

A SUBSIDIARY OF AUSTRALIAN MINING  
AND SMELTING COMPANY LIMITED

**AM&S**

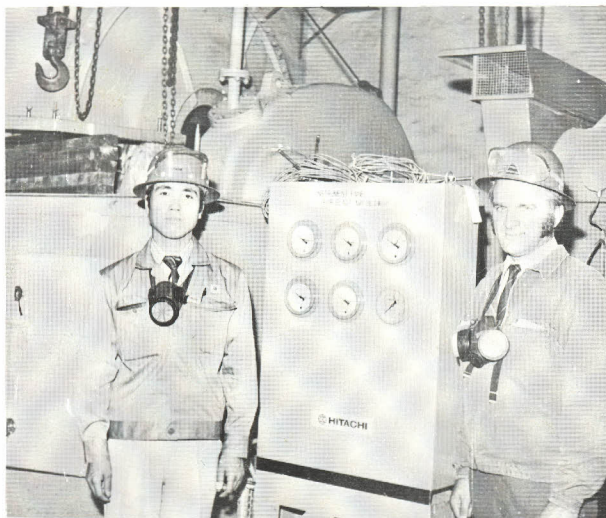

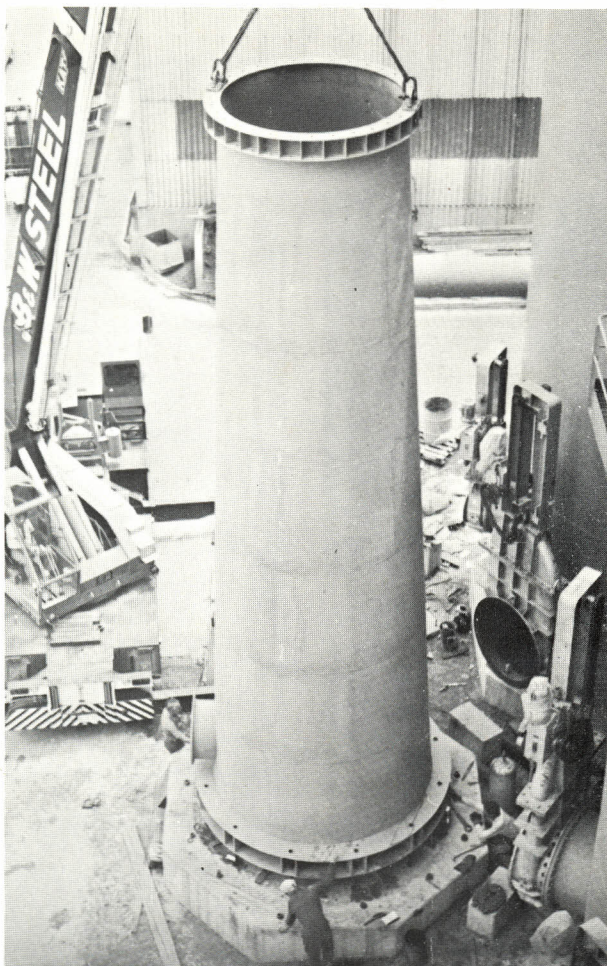

The hot blast stoves project is now reaching an advanced stage of installation and in pictures on this page we feature two aspects of recent developments.

On Tuesday, 30th January we were on hand to photograph the positioning of the base section of the chimney. When the top is installed the chimney will be 131 feet 4 inches high.

In the picture below, standing near the instrument panel of the Hitachi blower, are Hiroshi Sasaki (left) and Don Connelly (right).

An engineer with one of the 36 manufacturing sections of Hitachi Limited, the turbo blower division, of Kawasaki, Japan, Hiroshi was here to supervise the installation of the blower (seen behind them in the pic.). The visit to Cockle Creek was twenty-three year old bachelor Hiroshi's first trip out of Japan. He has been with Hitachi for five years.

Hiroshi is very impressed with our country and the friendliness of the people and wishes that his stay here could have been longer (he leaves for home on Sunday, 4th March).

*As this News was at the printers we learned of the illness of two very well known Sulphidiers, Stan Pettet, of Engineering Planning and Jeff Dick, a stalwart of the Carpenter's Shop.*

*We sincerely trust that by now they are much improved.*
